

Asset details

Generation Time: 45.0 seconds

Inference Cost 0.0 USD

Gpu Usage: Not measured $\square$ nvidia-smi is unavailable (common for cloud/API generation).

Image Metrics

Resolution: 1024 x 1024 pixels

Sharpness Variance Laplacian: 621.59 higher is sharper

Psnr: Not measured $\square$ A matched --reference-image is required.

Ssim: Not measured $\square$ A matched --reference-image is required.

Lpips: Not measured $\square$ A matched --reference-image is required.

Video Metrics

Resolution: 960 x 960 pixels

Duration: 5.031 seconds

Frame Rate: 32.0 FPS

Sampled Frames: 16 frames

Scene Consistency Temporal Ssim: 0.78008 0 $\square$ 1 (Adjacent sampled frames; high values indicate stable appearance, not necessarily realism.)

Fvd: Not measured $\square$ A matched --reference-video is required.

Aligned Frame Psnr: Not measured $\square$ A matched --reference-video is required.

Aligned Frame Ssim: Not measured $\square$ A matched --reference-video is required.

AI Specific Metrics

Prompt Adherence Clip: 32.791 CLIP logit (Higher means stronger image $\square$ prompt alignment compare within one study.)

Object Consistency: Not measured $\square$ Requires labelled object detections across a test set do not infer it from a single asset

Character Consistency: Not measured $\square$ Requires identity annotations or face embeddings across video frames/test cases

Hallucination Rate: Not measured $\square$ Requires a labelled set of requested objects versus generated objects.

Study Metrics

Engagement: Not measured $\square$ Collect through a participant study or platform analytics.

Watch Time: Not measured $\square$ Collect through a participant study or platform analytics.

Brand Recall: Not measured $\square$ Collect through a participant study or platform analytics.

Persuasiveness: Not measured $\square$ Collect through a participant study or platform analytics.

Conversion Intent: Not measured $\square$ Collect through a participant study or platform analytics.

Realism: Not measured $\square$ Collect through a participant study or platform analytics.

Creativity: Not measured $\square$ Collect through a participant study or platform analytics.

Trust: Not measured $\square$ Collect through a participant study or platform analytics.

Purchase Intention: Not measured $\square$ Collect through a participant study or platform analytics.

Audio Quality: Not measured $\square$ Collect through a participant study or platform analytics.

Lip Sync Accuracy: Not measured $\square$ Collect through a participant study or platform analytics.

Interpretation

Full-reference metrics require a matched real/target reference. FVD is best reported as a mean over a test set.

Engagement, brand recall, persuasiveness, conversion intent, realism, creativity, trust and purchase

intention require a user study or production analytics
